

### THE PROBLEM

## THE U.S. MILITARY IS LOSING TRACK OF ITS OWN WEAPONS, CREATING A NATIONAL SECURITY CRISIS.

The Department of Defense manages an \$842 billion budget, yet cannot track its own weapons. This is not just waste - it is a national security failure.

- Over 40,000 U.S. military weapons are missing, including 1,900 guns lost or stolen - some used in crimes.
- Poor tracking allows U.S. weapons sent abroad to be sold or fall into enemy hands.
- 100+ night vision devices vanished from Fort Hood in 2021, and military gear has been found for sale online.
- Lost weapons and gear leave troops under-equipped, with no system to recover them.
- The U.S. military is losing weapons, and no one is stopping it.

### THE SOLUTION

## THE MILITARY ASSET TRACKING LEDGER (MATL)

A blockchain-powered tracking system that eliminates missing military weapons and ensures full accountability.

By providing real-time tracking, automated loss prevention, and immutable audit logs, MATL prevents theft, eliminates black-market resales, and ensures every piece of U.S. military equipment is always accounted for.

## ENDING BLACK-MARKET SALES AND SECURING THE MILITARY

### Weapons Stolen from the U.S. Military Are Being Used in Crimes

40,000 weapons sent to Ukraine are missing.

1,900+ U.S. military guns have been stolen and used in crimes.

Cartels, gangs, and militants take advantage of poor tracking.

If the Pentagon can't track its weapons, neither can we.

### Lost Weapons Are a National Security Threat

The DoD manages the largest military in the world but can't track its own weapons.

Lost M4 rifles, night vision scopes, and grenade launchers endanger U.S. citizens and allies.

Troops should have better access to U.S. weapons than terrorists and criminals.

### Taxpayers Deserve Accountability

U.S. taxpayers fund every single military rifle, vehicle, and piece of combat gear.

Why should Americans accept that the Pentagon "loses" weapons without consequence?

MATL restores public trust by ensuring full military transparency.

### THE MISSION

## SECURING AMERICA'S WEAPONS, PROTECTING AMERICA'S FUTURE

MATL tracks every military weapon to stop theft and black-market sales. Tokens, directly tied to U.S. success

Every firearm, night vision scope, and piece of military gear is permanently tracked.

The U.S. military must be fully equipped and accountable - blockchain tracking makes that possible.

MATL is not just logistics; it is essential for national security.

No more stolen weapons. No more black-market sales. No more Pentagon excuses.

### HOW IT WORKS

#### Unhackable Tracking for Military Weapons

- Every weapon and tactical asset gets a blockchain ID for tracking.
- All movements are recorded automatically for full accountability.
- Missing weapons are flagged instantly for investigation.
- Stops stolen U.S. weapons from ending up in crimes or enemy hands.

#### Real-Time Inventory Control

- Military leaders can see exactly where weapons and tactical gear are located at all times.
- Stops lost gear from leaving troops under-equipped.
- Wipes out phantom inventory - every weapon must exist, not just on paper.

#### Uncompromising Pentagon Accountability

- The Pentagon failed its 7th audit and cannot track its spending.
- 40,000 missing weapons in Ukraine show the urgent need for transparency.
- MATL ensures weapons are only paid for when delivered and logged.
- Prevents illegal sales, duplicate purchases, and untracked arms transfers.
